

## Statistics for the SDGs - indicators for regional priorities

<b>Name of the indicator</b>	<b>3.E.5 Number of influenza cases and suspected influenza cases per 100 population</b>
<b>Sustainable Development Goal</b>	Goal 3. Good health and well-being
<b>Priority</b>	Development of health prevention and rehabilitation and health promotion
<b>Definition</b>	Influenza cases and suspected influenza cases per 100 inhabitants.
<b>Unit</b>	persons
<b>Available dimensions</b>	total
<b>Methodological explanations</b>	<p>Morbidity is the frequency of new cases of a disease in the studied population.</p> <p>Influenza is an acute infectious disease of the respiratory system caused by infection with the influenza virus. Influenza is transmitted between people by droplets (for example, when sneezing), and the highest number of cases occurs during seasonal epidemics, causing acute symptoms that prevent professionally active people from working.</p>
<b>Data source</b>	Statistics Poland
<b>Data availability</b>	Annual data, since 2010
