

## Statistics for the SDGs - indicators for regional priorities

<b>Name of the indicator</b>	<b>6.A.1 Exploitable underground water resources [hm3]</b>
<b>Sustainable Development Goal</b>	Goal 6. Clean water and sanitation
<b>Priority</b>	Activities aimed at achieving high water quality, availability of its resources and its protection
<b>Definition</b>	The amount of total exploitable underground water resources expressed in cubic hectometers per year.
<b>Unit</b>	hm3
<b>Available dimensions</b>	total
<b>Methodological explanations</b>	<p><b>Underground waters</b> – water appearing in the rocks of the earth. Depending on the depth of occurrence of groundwater aquifers and the distribution of structures and the surrounding works are distinguished: subsurface water, ground water, underground waters, deep waters.</p> <p><b>Exploitable resources of underground water intakes</b> – the amount of underground water that can be withdrawn from an intake under given hydrological, technical and economic conditions, taking into account the demand for water and maintaining environmental protection requirements.</p> <p>Data as of 31 December.</p>
<b>Data source</b>	Polish Geological Institute – National Research Institute
<b>Data availability</b>	Annual data, since 2010
